Lecture of Obstetrics & Gynecology

Skin structure

Epidermis:

epi = above, derma = skin)

sub (below) + cutane (skin)
+ ous + (pertaining to)
adip/o (fat)

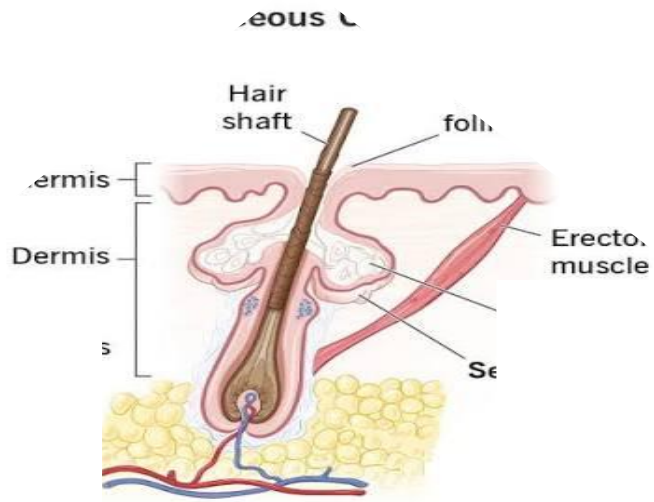

subcutaneous adipose
tissue.

Stratum:

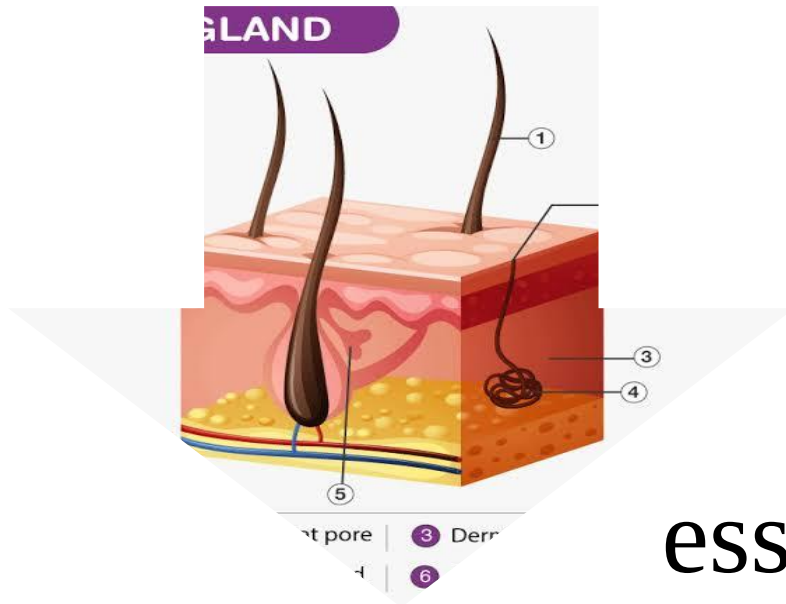

layer

produce oil or waxy substance,
called sebum

Sebaceous glands

Sweat gland

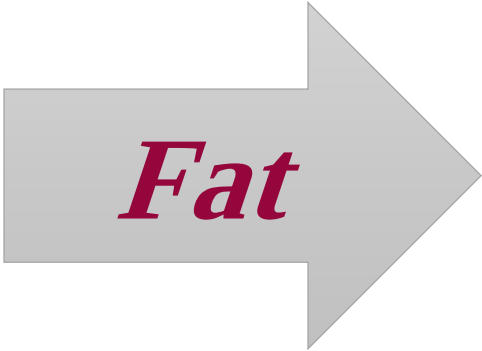

essential in temperature regulation and
waste elimination through perspiration

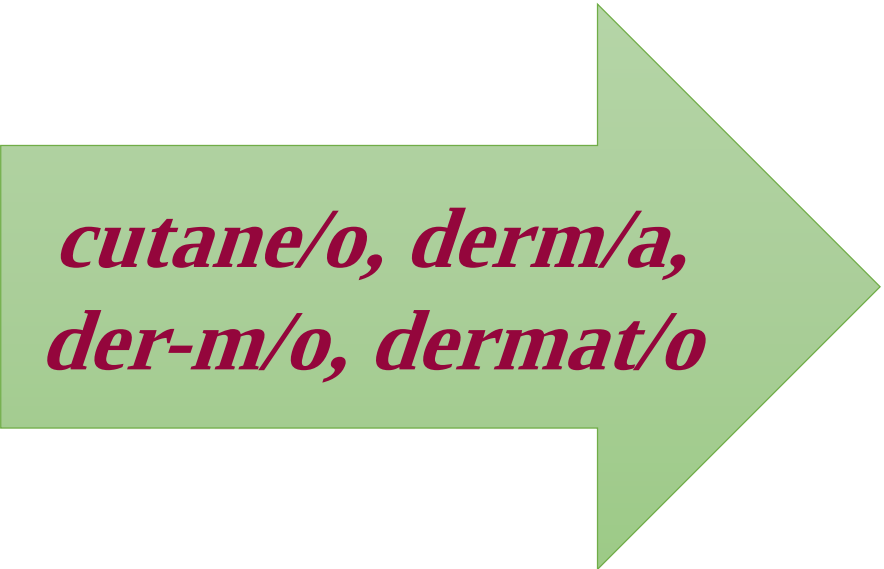

*adip/o,
lip/o*

Adipocytes are fat cells.

Fat

*cutane/o, derm/a,
der-m/o, dermat/o*

Cutaneous horns are
hard conical projections
from the skin

Skin

Dermatitis is a group of diseases
that results in skin inflammation.

follicul/o follicle

- Inflammation of the follicles is known as folliculitis.

derm skin or germ layer

- Embryonic germ layers;
Endoderm, mesoderm, ectoderm

DISEASES, DISORDERS, AND DIAGNOSTIC TERMS

Primary lesions

Vesicle: a
fluid-filled

Pustule: a
pus-filled.

Atrophy: thinning
of the epidermis

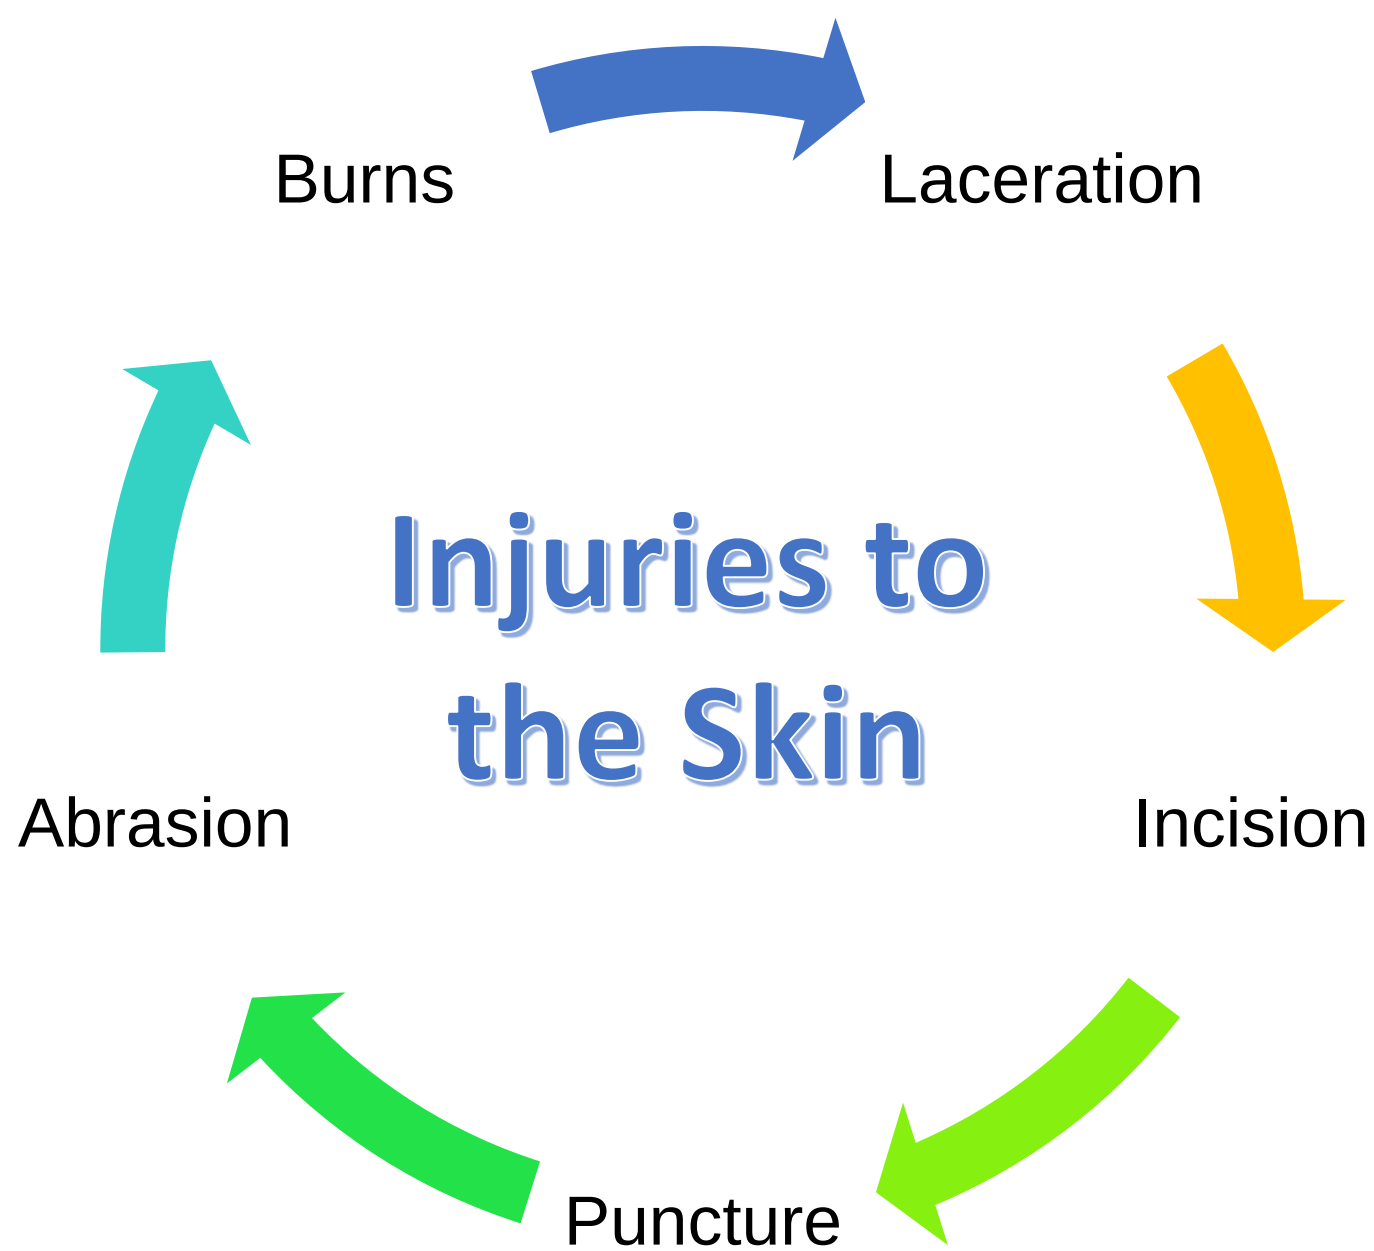

Ulcer: skin
erosions as
pressure ulcers

*Secondary
lesion*

Fissures: splits in
the skin

tearing of body tissue

Laceration

a surgical cut or clean-cut wound

Incision:

Incision

Open wound

Puncture

a small hole caused by a small object

shallow wounds or scrapes that tear or
rub off the epidermis

Abrasion

tissue injuries caused by extreme exposure to heat, chemicals, radiation, electricity, and sunlight.

Burns

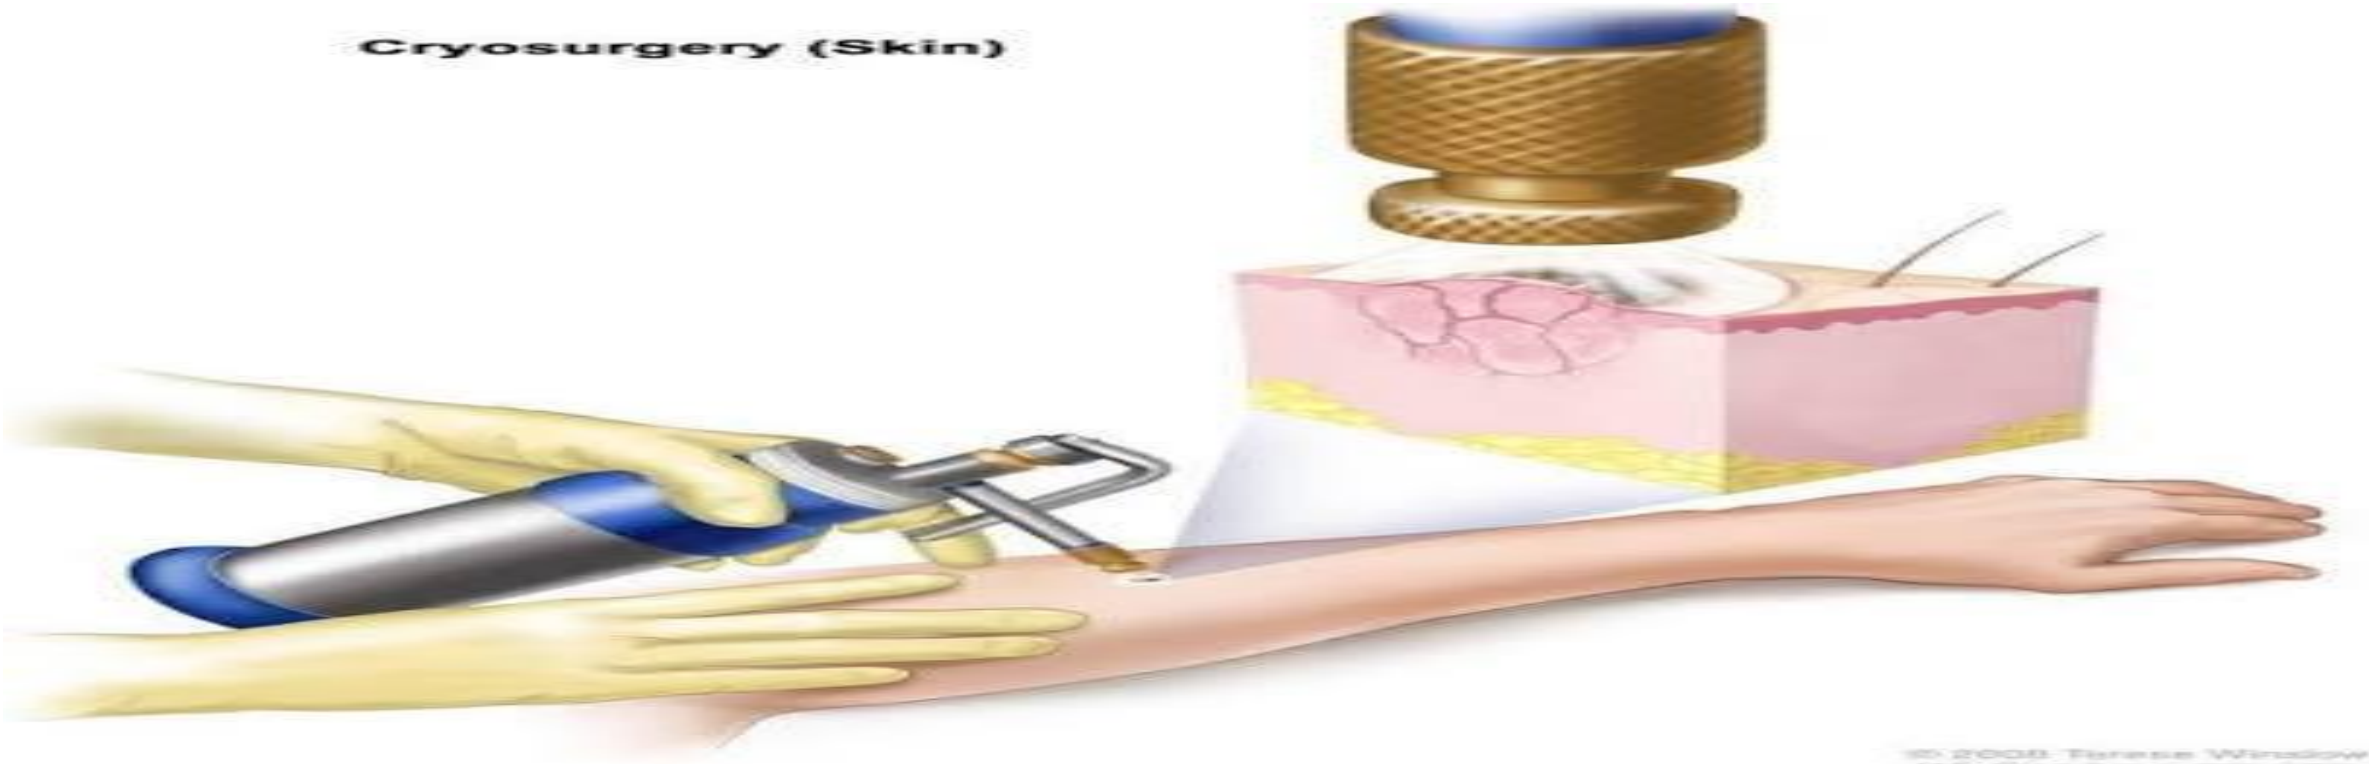

Surgical and therapeutic interventions

cryosurgery (cry/o + surgery)

otherwise referred to as cryotherapy by using extreme cold to destroy abnormal or diseased tissue.

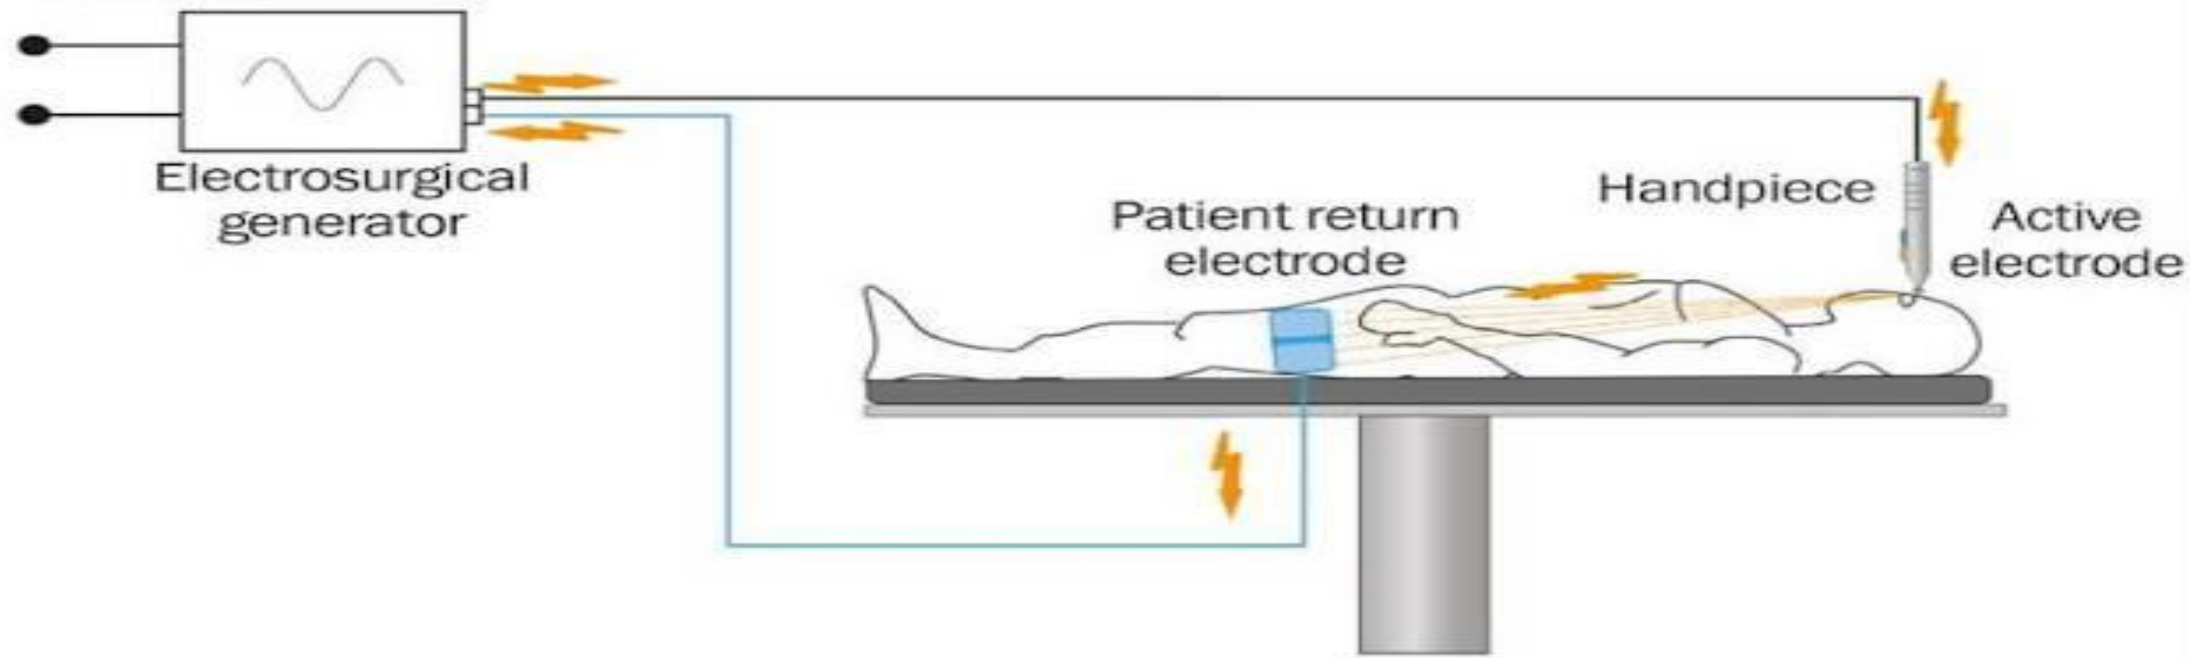

Cryosurgery (Skin)

Electro surgery (electr/o + surgery);

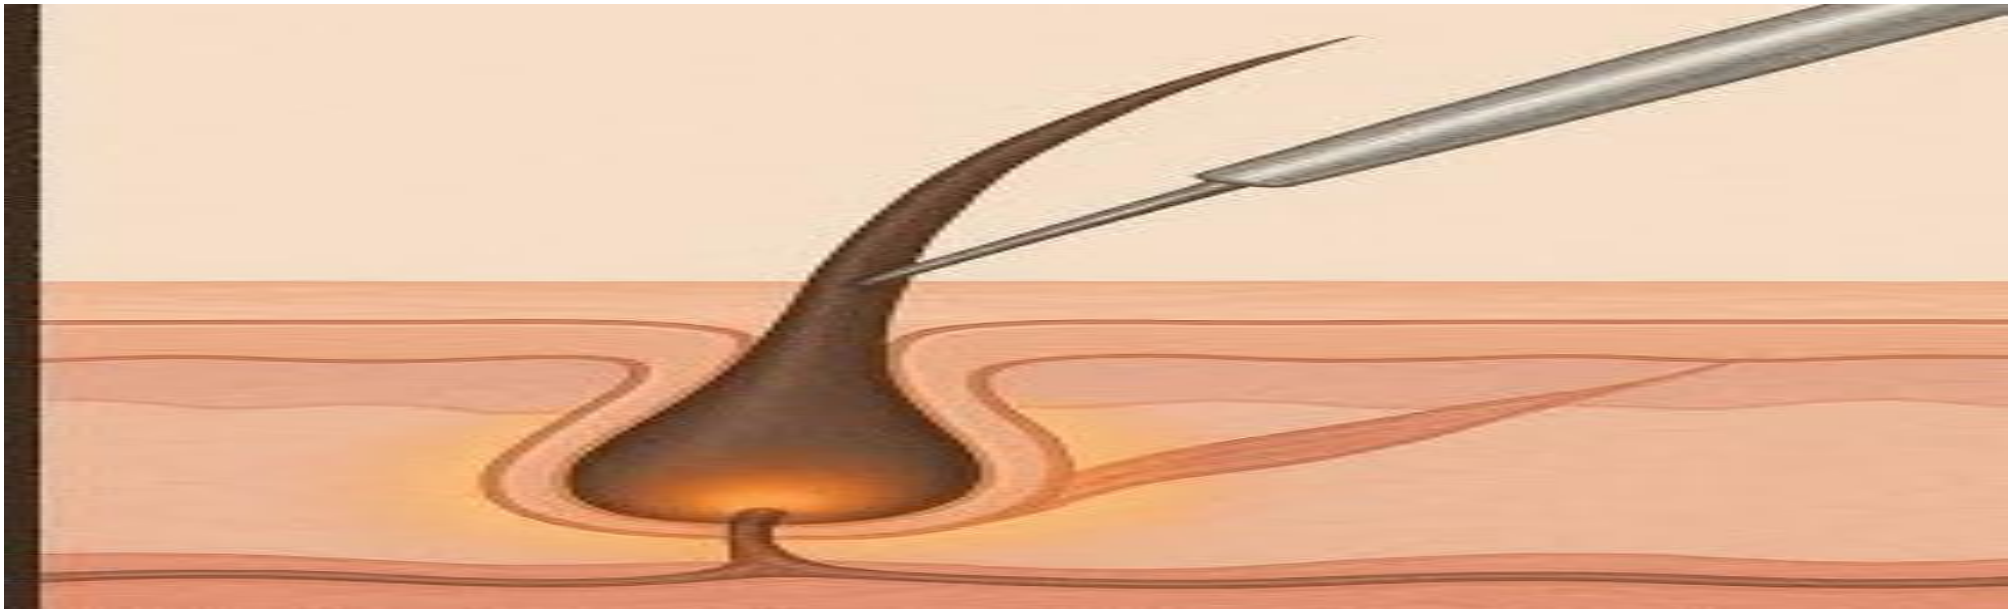

refers to several modalities that use electricity to cause destruction of tissue.

Figure 2

Electrolysis (electr/o + lysis);

means of destroying hair follicles through electric current.
